ROHDE Schutzgasöfen GmbH/Heat Treat Specialists. German furnace builder Rohde was in the news recently after providing what we would consider the world's largest pit carburizing furnace to German gear manufacturer and heat treater Reese in Bochum, Germany. Today they grace our pages for a different reason, the announcement of an order for a salt recovery unit from commercial heat treater "Heat Treat Specialists" in Logansport, Indiana. Rohdetherm.

ROHDE Schutzgasöfen GmbH recently installed a salt recovery unit in Logansport, Indiana, at hti "Heat Treat Specialists". Chico Rodriguez and Matt Gluth of hti previously visited the Rohde plant in Germany last year. Salt recovery units are able to recover quench salts from the wash water to obtain salt-free water and clean reusable quench salt in liquid or solid form. This allows for reduced costs for new salt and is environmentally friendly. Rohde has already sold a large number of these SRUs in Europe and is now promoting this product in the US where they have seen a great deal of interest. For sales, maintenance and service Rohde is represented in the US by Dan Miller from Honor Equipment & Repair in North Carolina. For further info on Rohde SRUs you can visit their website: www.rohdetherm.com
