

Siegen Tool and Hardening to Add Rohde Vacuum Nitriders

In Siegen, Germany we see that tooling supplier and commercial heat treater "Siegen Tool and Hardening Technology GmbH" is adding additional heat treating capacity. In the fall of 2018 this will include a ROHDE Schutzgasöfen GmbH vacuum nitriding system similar to the system in the photo below which is located at commercial heat treat HTU in Mühlhofen, Germany. Siegen Tool & Hardening currently has a number of furnaces which includes vacuum hardening up to 15 bar and the ability to offer Plasma nitriding and nitrocarburizing. **August 10, 2018**
